SUMMARY

About Myself

Besides pursuing Computer Engineering from NMIMS MPSTME, I have been driven by Robotics and AI from a very young age. I have participated in robotics competitions like JEB by Eduprime and WRO at national level. At present, I'm Sub-Head of the Events Department at IEEE MPSTME and executive at Robotics and IoT Department at GDSC MPSTME. Through these experiences, I've been familiar with the robotics events, project management and event planning. I am always finding opportunities to learn and grow, and excited to see where my passion in Computer Science takes me.

OVERVIEW

Skills

Apart from bookish knowledge, web-dev is one of the many fields that intrigues me. Java, C++, Python and JS are few programming languages that I have added to my skills. My primary focus stays on the frontend development. In addition to this, I have deepened my writing passion into blogs since school time. Besides academic activity, I have been a part of an NGO, Arham Yuva Seva Group, since four years, which covers projects focusing on serving humanity to animal welfare.
